- Innovative and compact design.
- Load bearing structure in impact-resistant material.
- Control panel protected against accidental impact.
- Robust handle integrated into the chassis.
- Sloping front control panel, easy to read and adjust and highly visible from any direction.
- Reduced weight and dimensions, easy-to-carry.
- The generator also conforms to all European Union standards and directives in force.

Technical data

The general technical data of the system are summarized in table 1.

Usage limits (IEC 60974-1)

The use of a welder is typically discontinuous, in that it is made up of effective work periods (welding) and rest periods (for the positioning of parts, the replacement of wire and underflushing operations etc. This welder is dimensioned to supply a I_2 max nominal current in complete safety for a period of work of 25% of the total usage time. The regulations in force establish the total usage time to be 10 minutes. The work cycle is considered to be 25% of this period of time. If the permitted work cycle time is exceeded, an overheat cut-off occurs to protect the components around the welder from dangerous overheating. Intervention of the overheat cut-off is indicated by the lighting up of yellow thermostat LED. After several minutes the overheat cut-off rearms automatically (and the yellow LED turns itself off) and the welder is ready for use again. This generator is constructed in compliance with the IP 23 S protection level, meaning:

- That it is protected against the penetration of solid foreign bodies with diameters in excess of Ø 12 mm.

Table 1

| Model | PoWer TIG 170 DC Pulse | |
|------------------------------------|------------------------|-----------------------------------|
| | TIG DC | MMA |
| Single-phase power supply 50/60 Hz | V | 230 |
| Mains supply: Z_{max} (*) | Ω | 0,21 |
| Power input @ I_2 Max | kVA | 7,2 7,9 |
| Delayed fuse (I_2 @ 100%) | A | 16 |
| Power factor / $\cos\phi$ | | 0,61 / 0,99 |
| Maximum efficiency degree | η | 0,65 |
| Open circuit voltage | V | 88 |
| Current range | A | 5÷170 5÷150 |
| Duty cycle @ 100% (40°C) | A | 95 |
| Duty cycle @ 60% (40°C) | A | 115 |
| Duty cycle @ X% (40°C) | A | 170 (20%) 150 (25%) |
| Standards | | IEC 60974-1 IEC 60974-10 CE |
| Insulation class | | IP 23 S |
| Protection class | | F |
| Dimensions | mm | 390-300-135 |
| Weight | kg | 7 |

(*) Mains supply Z_{max} : maximum impedance value allowed for the grid according to the EN/IEC 61000-3-11 standard.

WARNING: This equipment does not comply with EN/IEC 61000-3-12. If it is connected to a public low voltage system, it is the responsibility of the installer or user of the equipment to ensure, by consultation with the distribution network operator if necessary, that the equipment may be connected.

- That it is protected against water spray hitting the surface with an angle of incidence up to 60°.
- That the welding machine has been tested for withstanding harmful effects due to water getting in when the moving parts on the equipment are moving.

Installation

The installation site for the system must be carefully chosen in order to ensure its satisfactory and safe use.

The user is responsible for the installation and use of the system in accordance with the producer's instructions contained in this manual.

Before installing the system the user must take into consideration the potential electromagnetic problems in the work area. In particular, we suggest that you should avoid installing the system close to:

- Signalling, control and telephone cables.
- Radio and television transmitters and receivers.
- Computers and control and measurement instruments.
- Security and protection instruments.

Persons fitted with pace-makers, hearing aids and similar equipment must consult their doctor before going near a machine in operation. The equipment's installation environment must comply to the protection level of the frame i.e. IP 23 S (IEC 60529 publication). The system is capable of working in environments where working conditions are particularly hard. This system is cooled by means of the forced circulation of air, and must therefore be placed in such a way that the air may be easily sucked in and expelled through the apertures made in the frame.

Connection to the electrical supply

Before connecting the welder to the electrical supply, check that the machine's plate rating corresponds to the supply voltage and frequency and that the line switch of the welder is in the "O" position.

Use the welder's own plug to connect it up to the main power supply. Proceed as follows if you have to replace the plug:

- 2 conducting wires are needed for connecting the machine to the supply
- The third, which is YELLOW GREEN in colour is used for making the "EARTH" connection.

RAINBOW 170 HF works with circuit breaker or fusible power switches.

Table 2 shows the recommended load values for retardant supply fuses.

Table 2

| Model | PoWer TIG 170 DC Pulse | |
|--------------------------------------|------------------------|----------------------------|
| | TIG DC | MMA |
| Power input @ I ₂ Max | kVA | 7,2 7,9 |
| Delayed fuse (I ₂ @ 100%) | A | 16 |
| Duty cycle @ X% (40°C) | A | 170 (20%)* 150 (25%)* |
| Supply connection cable | | |
| Length | m | 2,2 |
| Section | mm ² | 2,5 |
| Earth cable | | |
| Section | mm ² | 16 |

* Factor of efficiency

NOTE 1: Any extensions to the power cable must be of a suitable diameter, and absolutely not of a smaller diameter than the special cable supplied with the machine.

NOTE 2: It is not advisable to plug up the welder to motor-driven generators, as they are known to supply an unstable voltage.

Usage norms

CONTROL APPARATUS (Fig. A)

- Pos. 1 Supply switch. In the "O" position the welder is off.
- Pos. 2 Weld gas inlet coupling.
- Pos. 3 Welder cable.
- Pos. 4 Fast coupling TIG torch gas tube .
- Pos. 5 Fast coupling reverse polarity .
- Pos. 6 TIG connector torch button.
- Pos. 7 Fast coupling straight polarity.

FRONT PANEL (Fig. B)

- Pos. 1 "Slope-down" potentiometer (0+5 sec).
- Pos. 2 "Welding process" selector:
 - TIG "HF" for TIG weld with high frequency arc strike.
 - "Lift" type TIG for "Lift" type TIG weld without high frequency.
 - ELECTRODE for basic electrode welding with automatic "Arc Force" and "Hot Start" devices.
- Pos. 3 "Welding mode" selector: 2 stroke, 4 stroke.
- Pos. 4 Welding current adjust potentiometer.
- Pos. 5 Post-gas time adjustment potentiometer (0,5+25 sec).
- Pos. 6 Yellow THERMOSTAT LED. When this LED switches on it indicates that the trip switch has tripped because you are working beyond the work cycle. Wait for a few minutes before starting to weld again.
- Pos. 7 Green POWER SUPPLY LED. When this LED is on, it means that the power supply to the welding machine is on, and it is ready to work.

MMA electrode welding (Fig. C)

Electrode welding is used to weld most metals (different types of steel, etc.) using coated rutileic and basic electrodes with diameters ranging from Ø 1.6 mm to Ø 4 mm.

- 1) Connecting the welding cables:
Disconnect the machine from the mains power supply and connect the welding cables to the output terminals (Positive and Negative) of the welding machine, attaching them to the clamp and earth with the polarity specified for the type of electrode being used (Fig. C). Always follow the electrode manufacturer's instructions. The welding cables must be as short as possible, they must be near to one another, positioned at or near floor level.
- 2) Adjust the welding current using the potentiometer (Pos. 4, Fig. B).
- 3) Turn the process selector (Pos. 2, Fig. B) to the ELECTRODE position (for basic electrode welding using automatic "Arc Force" and "Hot Start" devices).
- 4) Start the welding machine by selecting position 1 on the line switch (Pos. 1, Fig. A).
- 5) The green LED (Pos. 7, Fig. B) shows that the power supply to the welding machine is on, and it is ready to work.
- 6) Carry out welding by moving the torch to the workpiece. Strike the arc (press the electrode quickly against the metal and then lift it) to melt the electrode, the coating of which forms a protective residue. Then continue welding by moving the electrode from left to right, inclining it by about 60° compared with the metal in relation to the direction of welding.

PART TO BE WELDED

The part to be welded must always be connected to earth in order to reduce electromagnetic emission. Much attention must be afforded so that the earth connection of the part to be welded does not increase the risk of accident to the user or the risk of damage to other electric equipment. When it is necessary to connect the part to be welded to earth, you should make a direct connection between the part and the earth shaft. In those countries in which such a connection is not allowed, connect the part to be welded to earth using suitable capacitors, in compliance with the national regulations.

FIG. A

FIG. C

Table 3

| WELDING THICKNESS (mm) | Ø ELECTRODE (mm) |
|------------------------|------------------|
| 1,2÷2 | 1,6 |
| 1,5 ÷ 3 | 2 |
| 3 ÷ 5 | 2,5 |
| 5 ÷ 12 | 3,2 |
| ≥ 12 | 4 |

Table 4

| Ø ELECTRODE (mm) | CURRENT (A) |
|------------------|-------------|
| 1,6 | 30 ÷ 60 |
| 2 | 40 ÷ 75 |
| 2,5 | 60 ÷ 110 |
| 3,2 | 95 ÷ 140 |
| 4 | 140 ÷ 190 |

WELDING PARAMETERS

Table 3 shows some general indications for the choice of electrode, based on the thickness of the parts to be welded. The values of current to use are shown in the table with the respective electrodes for the welding of common steels and low-grade alloys. These data have no absolute value and are indicative data only. For a precise choice follow the instructions provided by the electrode manufacturer.

The current to be used depends on the welding positions and the type of joint, and it increases according to the thickness and dimensions of the part.

The current intensity to be used for the different types of welding, within the field of regulation shown in table 4 is:

- High for plane, frontal plane and vertical upwards welding.
- Medium for overhead welding.
- Low for vertical downwards welding and for joining small pre-heated pieces.

A fairly approximate indication of the average current to use in the welding of electrodes for ordinary steel is given by the following formula:

$$I = 50 \times (\varnothing e - 1)$$

Where:

I = intensity of the welding current

$\varnothing e$ = electrode diameter

Example:

For electrode diameter 4 mm

$$I = 50 \times (4 - 1) = 50 \times 3 = 150A$$

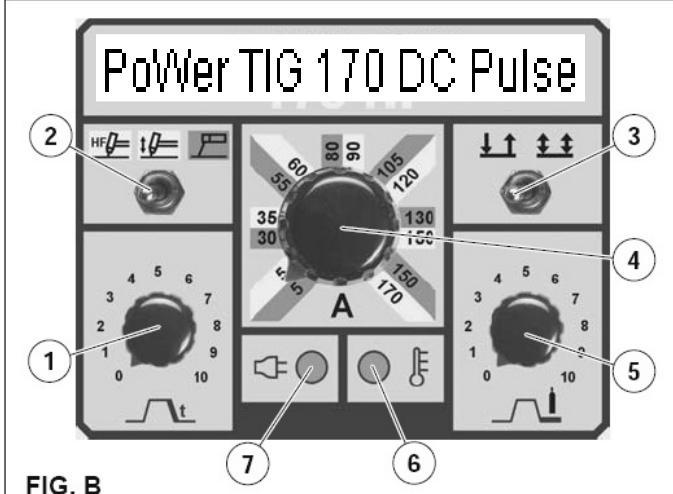

FIG. B

FIG. D

TIG welding (Fig. D-E-F)

TIG welding melts the metal of the workpiece, using an arc struck by a tungsten electrode.

The fusion bath and the electrode are protected by gas (Argon). This type of welding is used to weld thin sheet metal or when elevated quality is required.

1) Connecting the welding cables:

- Connect the gas pipe at the rear of the machine to the Argon gas cylinder then open it (Pos. 5, Fig. D).
- With the machine switched off:
 - Connect the earth cable to the snap-on connector marked + (positive) (Pos. 3, Fig. D).
 - Connect the relative earth clamp to the workpiece or to the workpiece support in an area free of rust, paint, grease, etc..
 - Connect the TIG torch power cable to the snap-on connector marked - (negative) (Pos. 1, Fig. D).

2) Connect the torch gas tube to the connection (Pos. 4, Fig. D).

3) Insert the torch button connector in the 6 poles holder (Pos. 2, Fig. D).

- 4) Start the welding machine by selecting Pos. 1 on the line switch (Pos. 1, Fig. A).

- 5) The green LED (Pos. 7, Fig. B) shows that the power supply to the welding machine is on, and it is ready to work.

TIG WELDING WITH HIGH FREQUENCY STRIKING

- 6a) Turn the process selector (Pos. 2, Fig. B) to the TIG "HF" position for TIG welding with high frequency striking.

- 7a) Adjust the welding current by turning the relevant knob (Pos. 4, Fig. B).

- 8a) Open the gas cylinder and flow regulator.

- 9a) Put the electrode at the point at which welding is to begin, put the TIG torch at an angle so that the edge of the gas nozzle is not on top of the piece to be welded, keeping a 2-3 mm gap between the point of the electrode and the piece to be welded (Fig. E-1).

- 10a) Press the torch button.

- 11a) The voltaic arc strikes even without contact between the TIG torch electrode and the workpiece (Fig. E-2).

- 12a) To continue welding put the torch back in its normal position (Fig. E-3).

IMPORTANT: The high frequency switches off automatically after switching on.

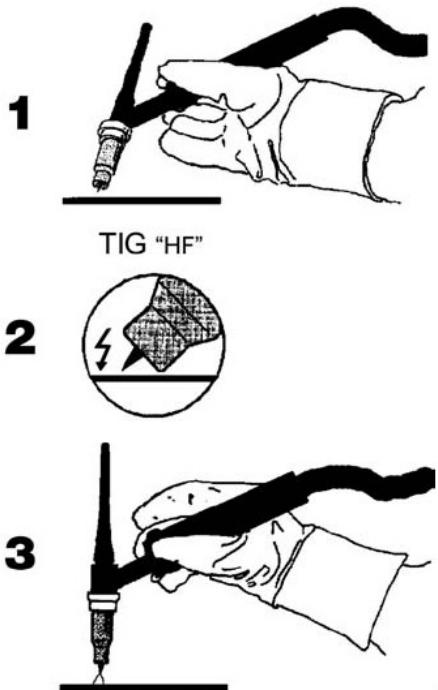

FIG. E

2000HA72

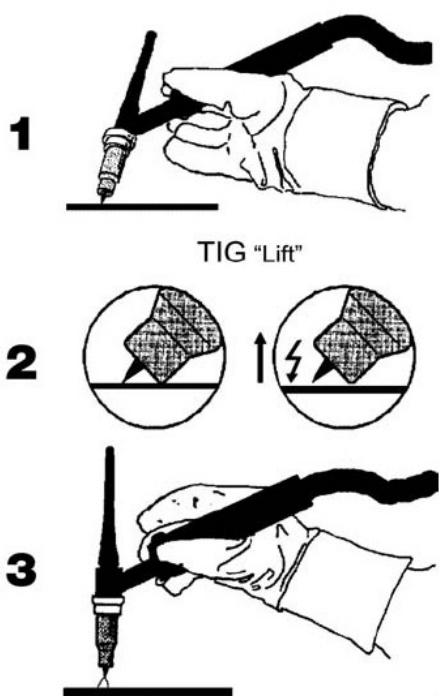

FIG. F

2000HA73

TIG WELDING WITH "Lift" TYPE STRIKING

- 6b) Turn the process selector (Pos 2, Fig. B) to the TIG "Lift" type position for TIG "Lift" welding without high frequency.
- 7b) Adjust the welding current by turning the relevant knob (Pos. 4, Fig. B).
- 8b) Open the gas cylinder and flow regulator.
- 9b) Put the electrode at the point at which welding is to begin, put the TIG torch at an angle so that the edge of the gas nozzle is not on top of the piece to be welded, keeping contact between the point of the electrode and the piece to be welded (Fig. F-1).
- 10b) Press the torch button.
- 11b) The "Lift" function strikes the arc when the TIG torch electrode comes into contact with the workpiece and is then removed (Fig. F-2)
- 12b) Carry out TIG welding (Fig. F-3).

PART TO BE WELDED

The part to be welded must always be connected to earth in order to reduce electromagnetic emission. Much attention must be afforded so that the earth connection of the part to be welded does not increase the risk of accident to the user or the risk of damage to other electric equipment. When it is necessary to connect the part to be welded to earth, you should make a direct connection between the part and the earth shaft. In those countries in which such a connection is not allowed, connect the part to be welded to earth using suitable capacitors, in compliance with the national regulations.

Maintenance

WARNING: Before carrying out any inspection of the inside of the generator, disconnect the system from the supply.

SPARE PARTS

Original spare parts have been specially designed for our equipment. The use of non-original spare parts may cause variations in performance or reduce the foreseen level of safety. We decline all responsibility for the use of non-original spare parts.

GENERATOR

As these systems are completely static, proceed as follow:

- Periodic removal of accumulated dirt and dust from the inside of the generator, using compressed air. Do not aim the air jet directly onto the electrical components, in order to avoid damaging them.
- Make periodical inspections in order to individuate worn cables or loose connections that are the cause of overheating.

The pointing out of any difficulties and their elimination

The supply line is attributed with the cause of the most common difficulties. In the case of breakdown, proceed as follows:

- 1) Check the value of the supply voltage.
- 2) Check that the power cable is perfectly connected to the plug and the supply switch.
- 3) Check that the power fuses are not burned out or loose.
- 4) Check whether the following are defective:
 - The switch that supplies the machine.
 - The plug socket in the wall.
 - The generator switch.

NOTE: Given the required technical skills necessary for the repair of the generator, in case of breakdown we advise you to contact skilled personnel or our technical service department.

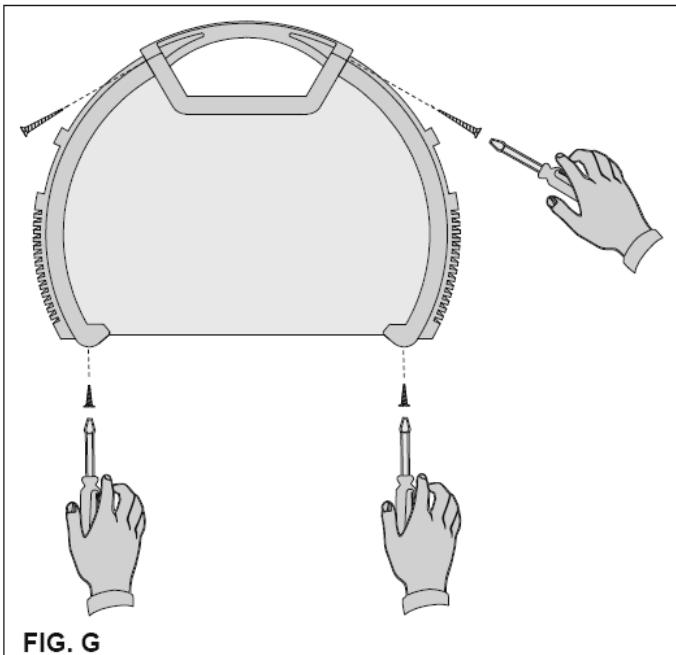

FIG. G

Procedure for welder assembly and disassembly

Proceed as follows (Fig. G):

- Unscrew the 4 screws holding the front and back panels.
- Unscrew the 2 screws holding the handle.
- Proceed the other way round to re-assemble the welder.

| 45 | 425933 | Elettrovalvola gas | Gas solenoid valve |

IT Ordinazione dei pezzi di ricambio

Per la richiesta di pezzi di ricambio indicare chiaramente:

- 1) Il numero di codice del particolare
- 2) Il tipo di impianto
- 3) La tensione e la frequenza che rileverete dalla targhetta dei dati posta sull'impianto
- 4) Il numero di matricola

ESEMPIO

N° 2 pezzi, codice n. 239900 - per l'impianto PoWer TIG 170 DC Pulse HF - 230 V - 50/60 Hz - Matricola n°

EN Ordering spare parts

To ask for spare parts clearly state:

- 1) The code number of the piece
- 2) The type of device
- 3) The voltage and frequency read on the rating plate
- 4) The serial number of the same

EXAMPLE

N. 2 pieces code n. 239900 - for PoWer TIG 170 DC Pulse - 230 V - 50/60 Hz - Serial number

FR Commande des pièces de rechange

Pour commander des pièces de rechange indiquer clairement:

- 1) Le numéro de code de la pièce
- 2) Le type d'installation
- 3) La tension et la fréquence que vous trouverez sur la petite plaque de données placée sur l'installation
- 4) Le numéro de matricule de la même

EXEMPLE

N. 2 pièces code 239900 - pour l'installation PoWer TIG 170 DC Pulse - 230 V - 50/60 Hz - Matr. Numéro

DE Bestellung Ersatzteile

Für die Anforderung von Ersatzteilen geben Sie bitte deutlich an:

- 1) Die Artikelnummer des Teiles
- 2) Den Anlagentyp
- 3) Die Spannung und Frequenz, die Sie auf dem Datenschild der Anlage finden
- 4) Die Seriennummer der Schweißmaschine

BEISPIEL

2 Stück Artikelnummer 239900 - für Anlage PoWer TIG 170 DC Pulse - 230 V - 50/60 Hz - Seriennummer

ES Pedido de las piezas de repuesto

Para pedir piezas de repuesto indiquen claramente:

- 1) El número de código del particular
- 2) El tipo de instalación
- 3) La tensión y la frecuencia que se obtiene de la chapa datos colocada sobre la instalación
- 4) El número de matrícula de la soldadora misma

EJEMPLO

N. 2 piezas código 239900 - para instalación PoWer TIG 170 DC Pulse - 230 V - 50/60 Hz - Matrícula N.

NL Bestelling van reserveonderdelen

Voor het bestellen van onderdelen duidelijk aangeven:

- 1) Het codenummer van het onderdeel
- 2) Soort apparaat
- 3) Spanning en frequentie op het gegevensplaatje te vinden
- 4) Het serienummer van het lasapparaat

VOORBEELD

N. 2 stuks code 239900 - voor apparaat PoWer TIG 170 DC Pulse - 230 V - 50/60 Hz - Serie Nummer

PT Requisição de peças sobressalentes

Ao pedir as peças de substituição indique claramente:

- 1) O número de código da peça
- 2) O tipo de equipamento
- 3) A tensão e a frequência indicadas na la placa de dados do equipamento
- 4) O número de matrícula da própria máquina de soldar

EXEMPLO

N° 2 peças código n. 239900 - para o equipamento PoWer TIG 170 DC Pulse - 230 V - 50/60 Hz
Matrícula n.

SV Beställning af reservdelar

Vid förfrågan av reservdelar ange tydligt:

- 1) Detaljens kodnummer
- 2) Typ av apparat
- 3) Spänning och frekvens - den står bland tekniska data påapparatens märkplåt
- 4) Svetsens serienummer

EXEMPEL

2 st. detaljer kod 239900 - för apparat PoWer TIG 170 DC Pulse - 230 V - 50/60 Hz - Serienummer

N Bestilling av reservedeler

Ved bestilling av reservedeler må du oppgi:

- 1) Delenes kodnummer
- 2) Type apparat
- 3) Apparatets spenning og frekvens som finnes på merkeplaten for data på apparatet
- 4) Sveiseapparatets serienummer

EKSEMPEL

2 stk. detaljer kode 239900 - for apparat PoWer TIG 170 DC Pulse - 230 V - 50/60 Hz - Serienummer

RU Заказ запасных частей

Для запроса запасных частей укажите точно:

- 1) код запчасти,
- 2) модель машины,
- 3) напряжение и частоту, написанные на пластине,
- 4) ее серийный номер.

ПРИМЕР

2 шт., код № 239900, для сварочной машины PoWer TIG 170 DC Pulse 230 В - 50/60 Гц
Серийный номер
