

ENERGY POLICY

As Gedik Kaynak, we provide building management services in order to provide both environmental and economic benefits by producing common solutions for our development and participants. Within the scope of our service:

- To always comply with legal requirements, to reduce energy costs by adapting existing successful practices and energy-efficient and low-cost technologies, to protect energy resources by eliminating waste,
- To provide the necessary information and resources to increase the efficiency of the energy management system and energy performance in our activities in a continuous manner, and to achieve our goals and objectives,
- We will continuously improve and review the effectiveness and performance of the Energy Management System in accordance with national and international standard requirements,
- To train our staff on climate change, energy saving and efficiency, to support their habits of using energy efficiently,
- To communicate effectively with all our stakeholders in order to create common value and beneficial results on issues related to Energy Management and climate change,
- We will contribute to climate change and sustainability by following technological developments and innovations, purchasing energy-efficient products and services, and using energy and materials efficiently,
- To provide information support and raise awareness in the activities of our stakeholders in order to use energy efficiently in line with our energy policy,

As Gedik Kaynak, we undertake to carry out our activities by complying with national and international legal regulations and regulations, within an energy management system based on continuous development and by providing the necessary resources.
